

# AGRICULTURE, ENVIRONMENT & ENERGY SUSTAINABILITY

With growing concerns about environmental changes, the global community is seeking sustainable technologies to combat these issues, especially pollution and climate change. One of the most vulnerable and life sustaining activities at the risk of climate is change is agriculture. Agriculture Environment and Energy Sustainability explores the agricultural aspect of environmental change, it discusses crucial areas in the science of pollution and climate change and also presents a case for the use of renewable energy with special emphasis on biofuel technology.
