FOOD QUALITY ASSURANCE AND CERTIFICATION

The original idea in the preparation of this book is to present basic information on food quality assurance concepts. There has been a gaping void in the text of Food Quality Assurance Operations and required Certification which were discussed in depth, and also were in accordance with the nationwide syllabus for the Food Technology students, hence a textbook has been written keeping in mind the urgent need.

Features:

- Efforts have been made to describe food quality assurance aspects from raw material to finished product in a systematic and comprehensive manner. The subject matter illustrated with figures and tables, wherever, felt necessary.
- Each chapter has been divided into suitable descriptive content leading to precise information. Glossary containing related terms has been also presented.
- The book has been written keeping in view the requirements of the graduate, post graduate students, teachers and research scientists in Food Technology as per the latest recommendations of the 5th Deans' Committee.

Deshpande H. W. • Katke S. D.
