

INSTRUMENTAL TECHNIQUES IN AGRICULTURE

The purpose of writing this book is to bring into focus the practical use of the instruments for Plant physiology, Soil Science, Agronomy, Biochemistry, Horticulture, Plant Pathology, Animal and Dairy Science M.Sc. and Ph.D. students. It is very often seen that students familiar with the theoretical aspects of but fail to interpret the same in practice due to lack of instrumental operating knowledge.

This textbook describes the most up to date information on instruments used for plant physiological and biochemical observation, instruments used for soil fertility analysis, techniques used for molecular study, apparatus used for plant pathological investigation and techniques/apparatus/machines used in animal and dairy research. The contents will suffice and benefit to the B.Sc., M.Sc, Ph.D students, laboratory technicians and faculty members and Scientists of different branches of Agriculture.
